X`AW421 ADVANCED WEB APPLICATION DESIGN II - REACT JS AND REACT NATIVE
PROFESSIONAL DEGREE IN SOFTWARE ENGINEERING
IN-CLASS EXERCISE 13.1 Handling Forms in React Native with Formik and Yup

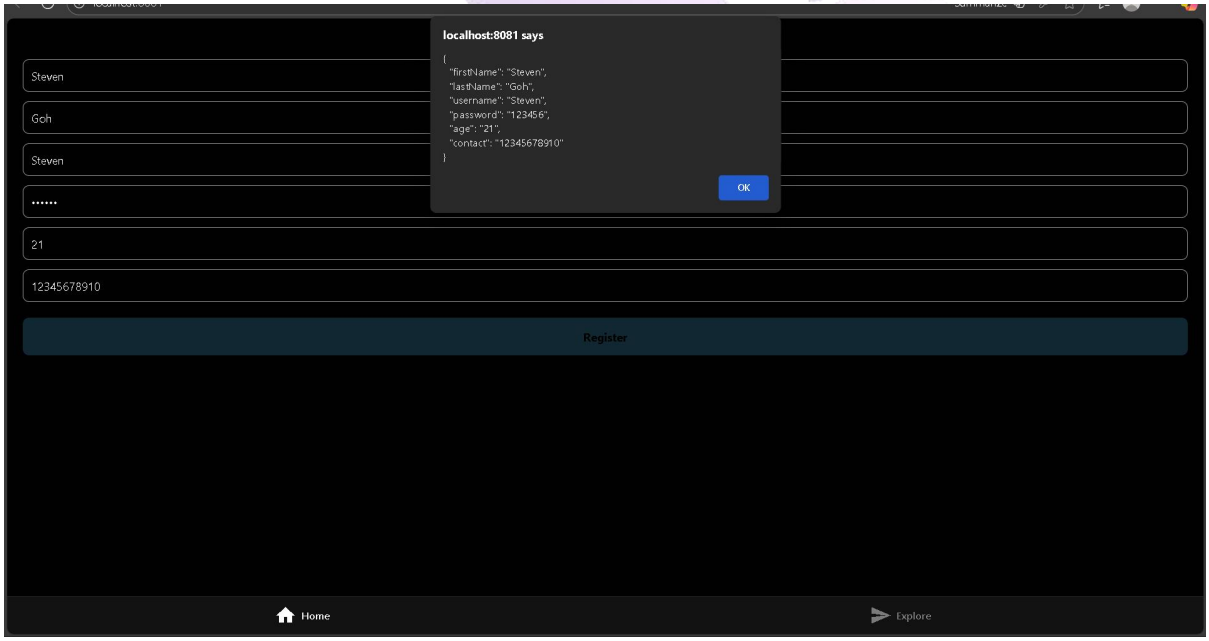
QUESTION 13.1: React Native Mobile Registration Form

Create a registration form with the following fields:

- First Name (required)
- Last Name (required)
- Username (required)
- Password (minimum six characters, maximum 12 characters)
- Age
- Contact Number

Apply Yup validation and show error messages below each input.

ANSWER:



SKILL BASED
IT TRAINING

```
import React from "react";
import { View, Text, TextInput, TouchableOpacity, StyleSheet, ScrollView } from "react-native";
import { Formik } from "formik";
import * as Yup from "yup";

const RegisterSchema = Yup.object().shape({
  firstName: Yup.string().required("First Name is required"),
  lastName: Yup.string().required("Last Name is required"),
  username: Yup.string().required("Username is required"),
  password: Yup.string()
    .min(6, "Min 6 characters")
    .max(12, "Max 12 characters")
    .required("Password is required"),
  age: Yup.number().optional(),
  contact: Yup.string().optional(),
});
```

```
export default function App() {
  return (
    <ScrollView contentContainerStyle={styles.container}>
      <Formik
        initialValues={{
          firstName: "",
          lastName: "",
          username: "",
          password: "",
          age: "",
          contact: "",
        }}
        validationSchema={RegisterSchema}
        onSubmit={(values) => alert(JSON.stringify(values, null, 2))}
      >
        {({ handleChange, handleBlur, handleSubmit, values, errors, touched }) => (
          <View>
```

```
            <TextInput
              style={styles.input}
              placeholder="First Name"
              onChangeText={handleChange("firstName")}
              onBlur={handleBlur("firstName")}
              value={values.firstName}
            />
            {touched.firstName && errors.firstName && <Text
style={styles.error}>{errors.firstName}</Text>}
```

```
            <TextInput
              style={styles.input}
              placeholder="Last Name"
              onChangeText={handleChange("lastName")}
              onBlur={handleBlur("lastName")}
              value={values.lastName}
            />
            {touched.lastName && errors.lastName && <Text
style={styles.error}>{errors.lastName}</Text>}
```

```
            <TextInput
```

SKILL BASED
